RESEARCH INTERESTS

I am interested in studying biological phenomena through simulation paired with laboratory observation. My current research focus is on elucidating mechanisms behind Tumor Treating Fields (TTFields) and Nanosecond Pulsed Electric Fields, both of which have been correlated with a breakdown in tubulin networks. My approach is to use nonequilibrium molecular dynamics to compare the motion of a tubulin model with and without strong external electric fields. Other related interests include image processing, synthetic biology, and software engineering.
